

SYSTEM AND METHOD FOR DYNAMICALLY UPDATING A SITE MAP AND
TABLE OF CONTENTS FOR SITE CONTENT CHANGES

Abstract of the Disclosure

5 A web site is broken up into main topical content
areas. Each area shows a list of content items that the
user can link to, displayed using views. A site map and
table of contents read these views to determine what the
user should see. The site map is a high level category
10 oriented view, and the table of contents is a more detailed
view, getting lower level to content items. Each time the
users requests the site map or table of contents, an agent
is executed to "lookup" into the content views, giving the
user the very latest content.
